Schedule

EQUIPMENT:

The Posifit non-metallic junction box series is manufactured from DMC (Dough Moulding Compound). The enclosures have a cylindrical shaped body with a screw on cover, secured with a special tool that engages into splines on the cover of the enclosure. The junction box comprises pressed metallic inserts in the side of the enclosure with threaded entries for certified glands or plugs. An O-ring is utilized between the housing and the cover of the enclosure to maintain the IP rating. The Junction box can be manufactured in various types and sizes. (See table below).

An optional polycarbonate / DMC cover may be screwed with four M5 countersunk screws into metallic inserts in a DMC adaptor, which is threaded to replace the normal threaded cover. An O-ring is utilised between the polycarbonate section and adaptor to maintain the IP rating.

A component certificate covers empty enclosures under certificate ANZEx 13.4128U.

A special tool is supplied fitting in grooves on the round cover for closing and opening.

An instruction manual is available for this range of junction boxes.
